Fig. 3

GT1-7 α -syn overexpressing cells were incubated with either anti-mouse α -syn serum or preimmune serum (1: 50) for 48 hrs.

-Result-

1. Cell proliferation was slightly suppressed in the anti-mouse α -syn serum (67-10) treated cells compared to the preimmune serum treated cells (not shown).
2. In the anti-mouse α -syn serum treated cells, the immuno-reactivity of α -syn was decreased in the particulate fraction.
